LM Guide Global Standard Size Model HSR

Point of Selection	A1-10
Point of Design	A1-436
Options	A1-459
Model No.	A1-523
Precautions on Use	A1-529
Accessories for Lubrication	A24-1
Mounting Procedure and Maintenance	B1-89
Equivalent moment factor	A1-43
Rated Loads in All Directions	A1-58
Equivalent factor in each direction	A1-60
Radial Clearance	A1-71
Accuracy Standards	A1-76
Shoulder Height of the Mounting Base and the Corner Radius	A1-447
Permissible Error of the Mounting Surface	A1-452
Dimensions of Each Model with an Option Attached	A1-472

Structure and Features

Balls roll in four rows of raceways precision-ground on an LM rail and an LM block, and endplates incorporated in the LM block allow the balls to circulate.

Since retainer plates hold the balls, they do not fall off even if the LM rail is pulled out (except models HSR 8, 10 and 12).

Each row of balls is placed at a contact angle of 45° so that the rated loads applied to the LM block are uniform in the four directions (radial, reverse radial and lateral directions), enabling the LM Guide to be used in all orientations. In addition, the LM block can receive a well-balanced preload, increasing the rigidity in the four directions while maintaining a constant, low friction coefficient. With the low sectional height and the high rigidity design of the LM block, this model achieves highly accurate and stable straight motion.

[4-way Equal Load]

Each row of balls is placed at a contact angle of 45° so that the rated loads applied to the LM block are uniform in the four directions (radial, reverse radial and lateral directions), enabling the LM Guide to be used in all orientations and in extensive applications.

[High Rigidity Type]

Since balls are arranged in four rows in a well-balanced manner, a large preload can be applied and the rigidity in four directions can easily be increased.

[Self-adjustment Capability]

The self-adjustment capability through front-to-front configuration of THK's unique circular-arc grooves (DF set) enables a mounting error to be absorbed even under a preload, thus to achieve highly accurate, smooth straight motion.

[High Durability]

Even under a preload or excessive biased load, differential slip of balls does not occur. As a result, smooth motion, high wear resistance, and long-term maintenance of accuracy are achieved.

[Stainless Steel Type also Available]

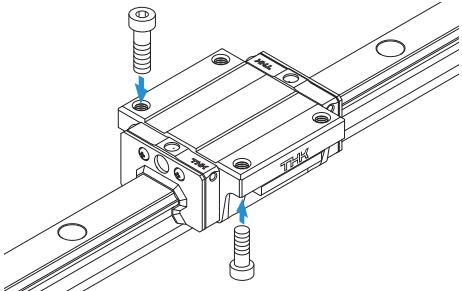

A special type which LM block, LM rail and balls are made of stainless steel is also available.

Types

Models HSR-C/XC

The flange of the LM block has tapped holes. Can be mounted from the top or the bottom. Used in places where the table cannot have through holes for mounting bolts.

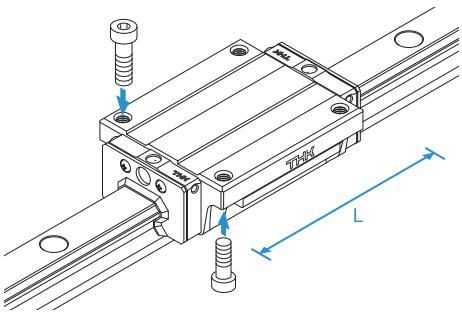

Specification Table⇒ [A1-184](#)

Models HSR-LC/XLC

The LM block has the same cross-sectional shape as model HSR-C, but has a longer overall LM block length (L) and a greater rated load.

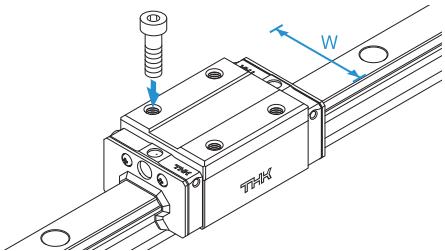

Specification Table⇒ [A1-184](#)

Models HSR-R/XR

With this type, the LM block has a smaller width (W) and tapped holes. Used in places where the space for table width is limited.

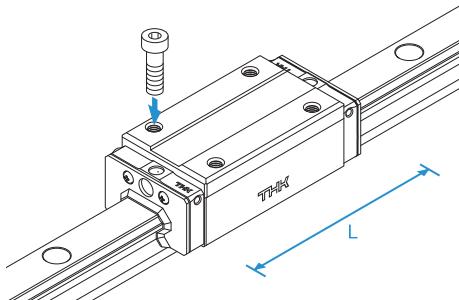

Specification Table⇒ [A1-186/A1-188](#)

Models HSR-LR/XLR

Specification Table⇒**A1-188**

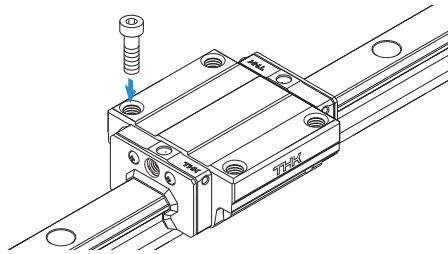

The LM block has the same cross-sectional shape as model HSR-R, but has a longer overall LM block length (L) and a greater rated load.

Model HSR-A

Specification Table⇒**A1-190**

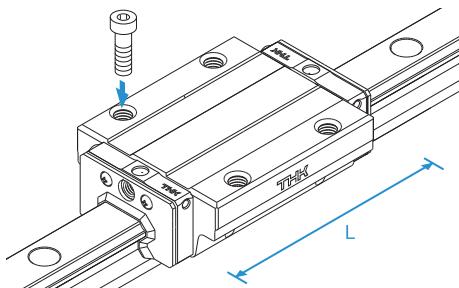

The flange of its LM block has tapped holes.

Model HSR-LA

Specification Table⇒**A1-190**

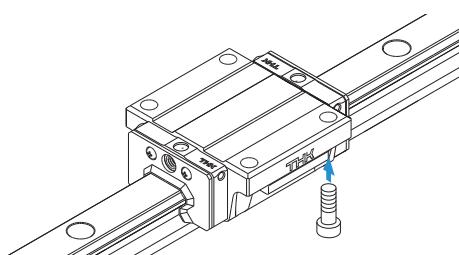

The LM block has the same cross-sectional shape as model HSR-A, but has a longer overall LM block length (L) and a greater rated load.

Model HSR-B

Specification Table⇒**A1-192**

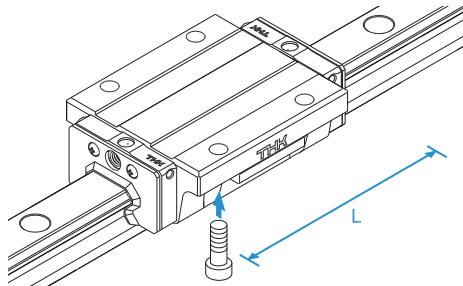

The flange of the LM block has through holes. Used in places where the table cannot have through holes for mounting bolts.

Model HSR-LB

The LM block has the same cross-sectional shape as model HSR-B, but has a longer overall LM block length (L) and a greater rated load.

Specification Table⇒ **A1-192**

Model HSR-YR

When using two units of LM Guide facing each other, the previous model required much time in machining the table and had difficulty achieving the desired accuracy and adjusting the clearance. Since model HSR-YR has tapped holes on the side of the LM block, a simpler structure is gained and reduced man-hour and increase in accuracy can be achieved.

Specification Table⇒ **A1-194**

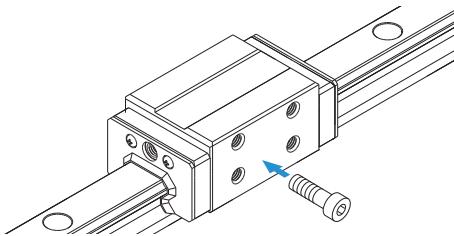

Fig.1 Conventional Structure

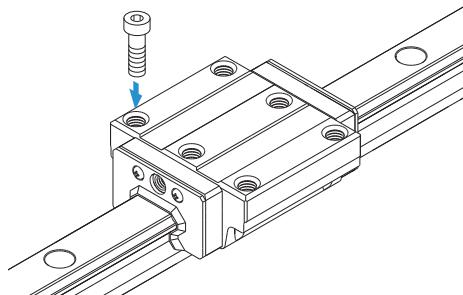

Fig.2 Mounting Structure for Model HSR-YR

Model HSR-CA

Has six tapped holes on the LM block.

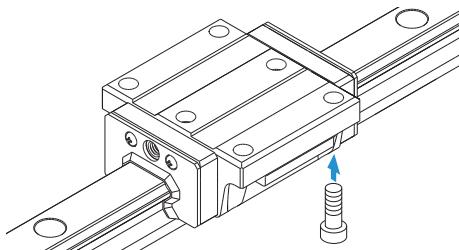

Specification Table⇒ **A1-196**

Model HSR-CB

The LM block has six through holes. Used in places where the table cannot have through holes for mounting bolts.

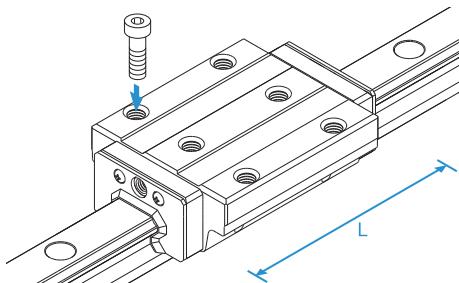

Specification Table⇒**A1-198**

Model HSR-HA

The LM block has the same cross-sectional shape as model HSR-CA, but has a longer overall LM block length (L) and a greater rated load.

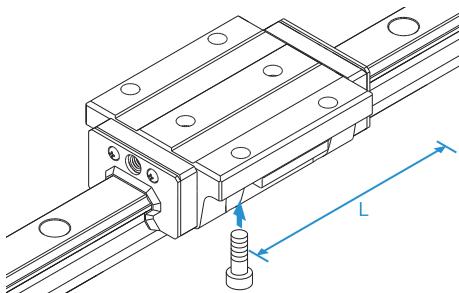

Specification Table⇒**A1-196**

Model HSR-HB

The LM block has the same cross sectional shape as model HSR-CB, but has a longer overall LM block length (L) and a greater rated load.

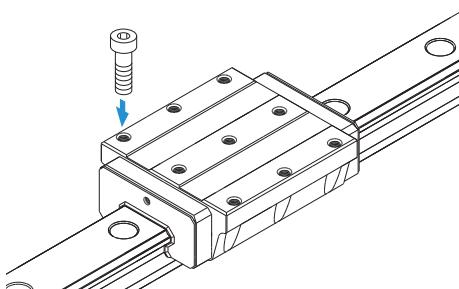

Specification Table⇒**A1-198**

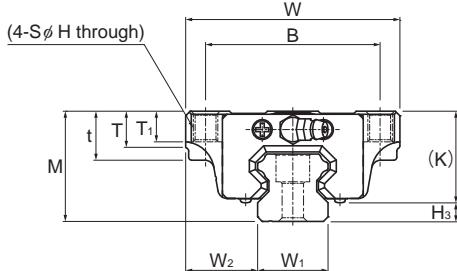

Models HSR 100/120/150 HA/HB/HR

Large types of model HSR that can be used in large-scale machine tools and building structures.

Specification Table⇒**A1-200**

Note) The maximum length under "Length*" indicates the standard maximum length of an LM rail. (See **A1-202**.)

Static permissible moment* 1 block: the static permissible moment with one LM block

Double blocks: static permissible moment when two LM blocks are in close contact with each other

Overall block length dimension (L) The overall block lengths (L) in the dimension table are for when the contamination protection accessory symbol is UU or SS.

The overall block length (L) will increase if another contamination protection accessory or

lubricator is attached.

(See **A1-472** or **A1-492**)

An "M" in the model number indicates the material of the LM block, LM rail, or balls are stainless steel.

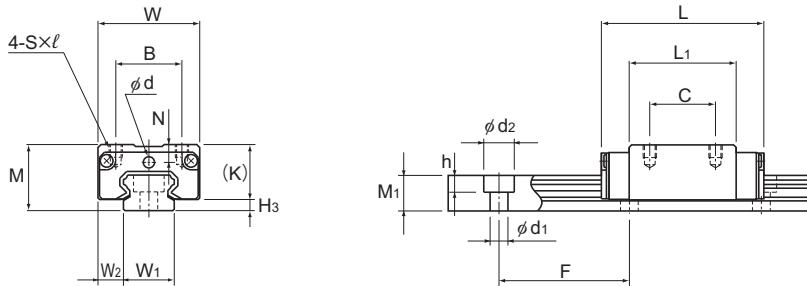

Stainless steel products have superior corrosion resistance and environmental resistance.

*The diagram shows the side nipple pilot holes for when a grease nipple is desired for a product with LaCS or a QZ Lubricator.

In all other cases, the side nipple pilot holes will not be through holes.

Consult with THK if you desire drilling for grease nipple mounting. (See **A1-415**.)

Note) The maximum length under "Length**" indicates the standard maximum length of an LM rail. (See **A1-202**.)

Static permissible moment*: 1 block: the static permissible moment with one LM block

Double blocks: static permissible moment when two LM blocks are in close contact with each other

Overall block length dimension (L): The overall block lengths (L) in the dimension table are for when the contamination protection accessory symbol is UU or SS.

The overall block length (L) will increase if another contamination protection accessory or lubricator is attached.
(See **A1-472** or **A1-492**)

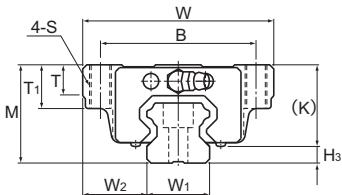

An "M" in the model number indicates the material of the LM block, LM rail, or balls are stainless steel.

Stainless steel products have superior corrosion resistance and environmental resistance.

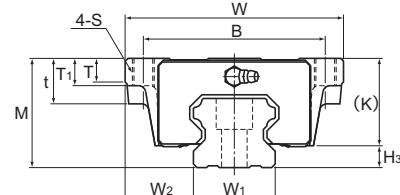

*The diagram shows the side nipple pilot holes for when a grease nipple is desired for a product with LaCS or a QZ Lubricator. In all other cases, the side nipple pilot holes will not be through holes.

Consult with THK if you desire drilling for grease nipple mounting.

Note) The maximum length under "Length*" indicates the standard maximum length of an LM rail. (See **A1-202**.)

Static permissible moment*: 1 block: the static permissible moment with one LM block

Double blocks: static permissible moment when two LM blocks are in close contact with each other

Total block length L : The total block length L shown in the table is the length with the dust proof parts, code UU or SS. If other contamination protection accessories or lubricant equipment are installed, the total block length will increase.

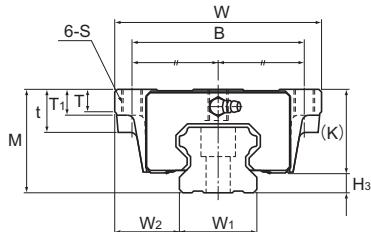

(See **A1-472** or **A1-492**)

The M in the model number symbol indicates that the LM block, LM rail and balls are made of stainless steel.
The stainless steel provides excellent corrosion and environmental resistance.

Static permissible moment*: 1 block: the static permissible moment with one LM block

Double blocks: static permissible moment when two LM blocks are in close contact with each other

Total block length L : The total block length L shown in the table is the length with the dust proof parts, code UU or SS.

If other contamination protection accessories or lubricant equipment are installed, the total block length will increase.

(See **A1-472** or **A1-492**)

Standard Length and Maximum Length of the LM Rail

Table1 shows the standard lengths and the maximum lengths of model HSR variations. If the maximum length of the desired LM rail exceeds them, jointed rails will be used. Contact THK for details. For the G dimension when a special length is required, we recommend selecting the corresponding G value from the table. The longer the G dimension is, the less stable the G area may become after installation, thus causing an adverse impact to accuracy.

G	7.5	10	15	20	20	20	20	20	22.5	30	35	45	40	45	50
Max length	(975)	(995)	(1240)	3000 (1240)	3000 (1480)	3000 (2020)	3000 (2520)	3000 (2520)	3090	3060	3000	3000	3000	3000	3000

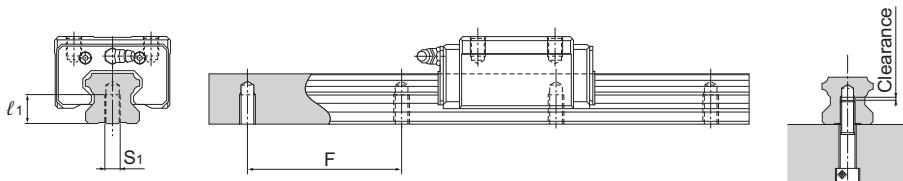

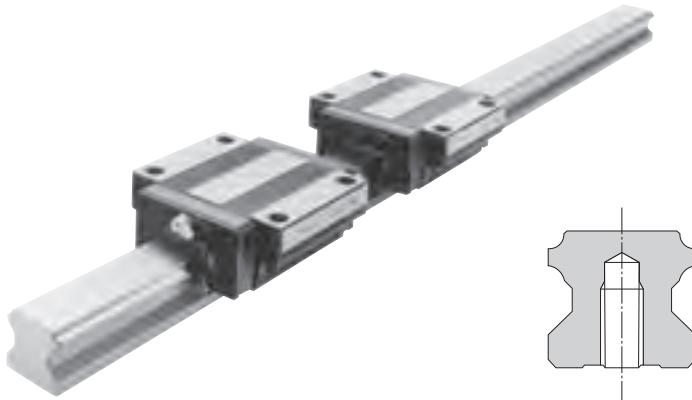

Note1) The maximum length varies with accuracy grades. Contact THK for details.

Note2) If jointed rails are not allowed and a greater length than the maximum values above is required, contact THK.

Note3) The figures in the parentheses indicate the maximum lengths of stainless steel made models.

Tapped-hole LM Rail Type of Model HSR

HSR model rails also include a type where the LM rail is tapped from the bottom. This type is useful when mounting from the bottom of the base and when increased contamination protection is desired.

- (1) Determine the bolt length so that a clearance of 2 to 5 mm is secured between the bolt end and the bottom of the tap (effective tap depth). (See figure above.)
- (2) A tapped-hole LM rail type is available also for model HSR-YR.
- (3) For standard pitches of the taps, see Table1 on **A1-202**.

Table2 Dimensions of the LM Rail Tap

Unit: mm

Model No.	S ₁	Effective tap depth l ₁
HSR 15	M5	8
HSR 20	M6	10
HSR 25	M6	12
HSR 30	M8	15
HSR 35	M8	17
HSR 45	M12	24
HSR 55	M14	24
HSR 65	M20	30

tapped-hole LM rail type

Prevention of LM block from falling off LM rail

In miniature model HSR, the balls fall out if the LM block comes off the LM rail.

For this reason, LM Guide assemblies are delivered with a part which prevents the LM block from coming off the rail. If you remove this part when using the product, please take precautions to avoid overrunning the blocks off of the rail.

Greasing Hole

[Greasing Hole for Model HSR]

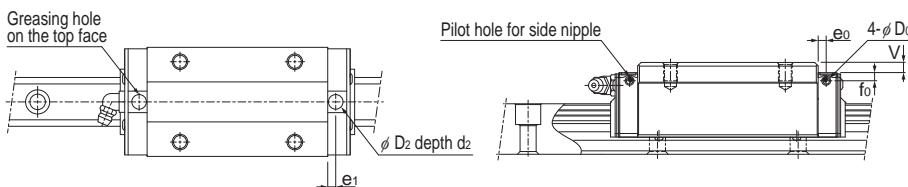

The Model HSR LM block can be greased from the side or top surface. In order to prevent foreign material from entering the LM block, greasing holes are not through holes in blocks with regular specifications. Contact THK if these will be used.

In addition, contact THK if you will use an upper surface greasing hole with a Model HSR-R, HSR-XR, HSR-LR, or HSR-XLR, as a lubrication adapter is required.

The lubricant may not reach the raceway if the LM Guide is not installed in a horizontal orientation.

Be sure to let THK know the mounting orientation and the position where the grease nipple or plumbing fixture will be attached to each LM block.

See **A1-12** for the mounting orientation and **A24-2** for lubrication.

Unit: mm

*Upper surface lubrication is for oil lubrication only. Contact THK if you are considering using the greasing hole on the top face for grease lubrication.

[Semi-standard Greasing Hole for Model HSR]

For model HSR, a semi-standard greasing hole is available. Specify the appropriate model number according to the application.

Type with a Greasing Hole Drilled on the Side Surface

Type with a Greasing Hole Drilled on the Top Face
